POSITIVE RETRACTION

Adjacent wedge segments are connected to prevent a stuck wedge lock. Turning the drive screw counterclockwise retracts the threaded drive wedge, pulling each of the connected segments down to their relaxed position.

The SOLIDWEDGE™ design provides three times the thermal contact area of conventional wedge locks. The design also features a larger screw size, which creates higher contact forces between the heat frame and cold wall surfaces, significantly improving thermal performance.

The interconnected links of the SOLIDWEDGE™ feature positive retraction of all segments without the use of springs or other mechanisms.

SOLIDWEDGE™ INSTALLATION

1

Apply Loctite 2760 to #4-40 pan head mounting screws (not included)

2

Align SOLIDWEDGE to mounting hole locations

3

Install screws and torque to 4 in-lbs. Ensure mounting screw doesn't hit drive screw.
(reference mounting drawing for max thread engagement)

CHECK INSTALL

Check alignment on both mounting blocks after torquing and press to straighten if necessary.

Ensure SOLIDWEDGE is functioning correctly by expanding and contracting with a hex key.

WARNING:

SOLIDWEDGES are not intended to be mounted directly to PCBs. The opposing force of the mounting blocks may result in board damage.
