

The SOLIDWEDGE $^{\text{TM}}$  is a breakthrough technology that allows conduction cooled modules to operate at higher thermal loads in higher temperature environments.

## OPTIMIZED FOR VITA 48.2 AND CPCI

## POSITIVE RETRACTION

Adjacent wedge segments are connected to prevent a stuck wedge lock. Turning the drive screw counterclockwise retracts the threaded drive wedge, pulling each of the connected segments down to their relaxed position.

The SOLIDWEDGE<sup>™</sup> design provides three times the thermal contact area of conventional wedge locks. The design also features a larger screw size, which creates higher contact forces between the heat frame and cold wall surfaces, significantly improving thermal performance.

The interconnected links of the SOLIDWEDGE $^{\text{\tiny M}}$  feature positive retraction of all segments without the use of springs or other mechanisms.
